(a) 1988 Historic Drought: July--August Rainfall (P)

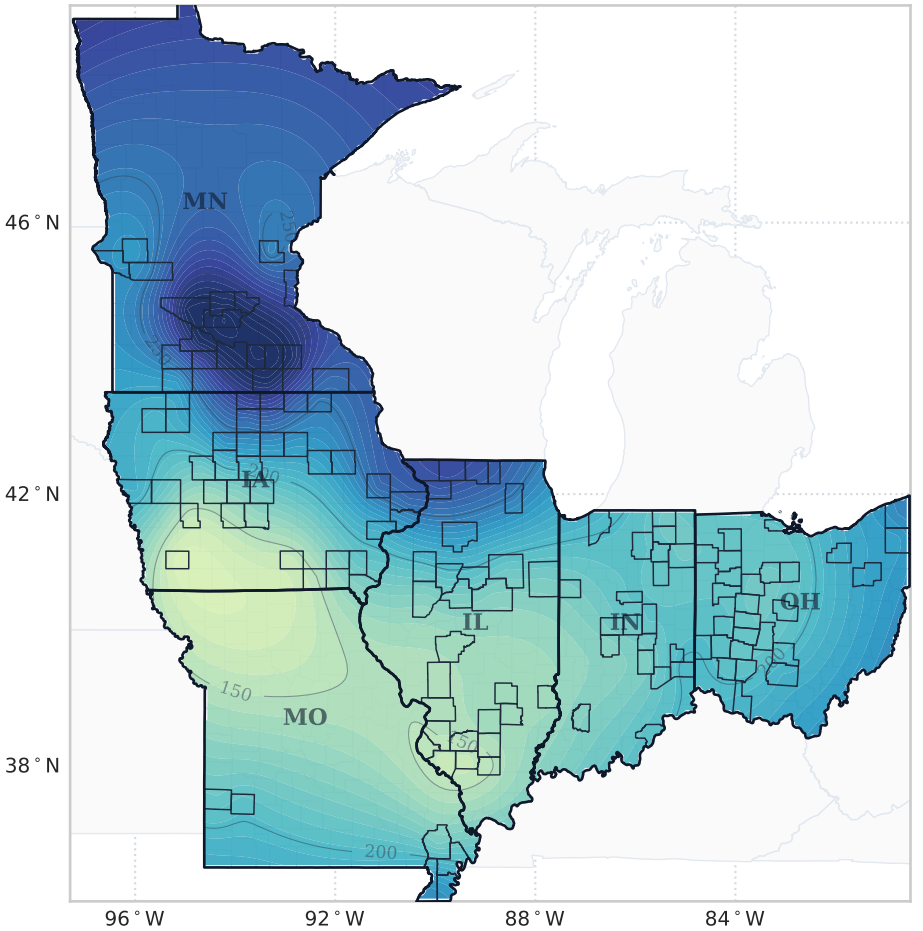

Yield Anomaly: -25.6% | Severe West Deficit (<150 mm) vs Scattered East Showers

(b) 1988 Historic Drought: Extreme Heat Stress (HD_{30})

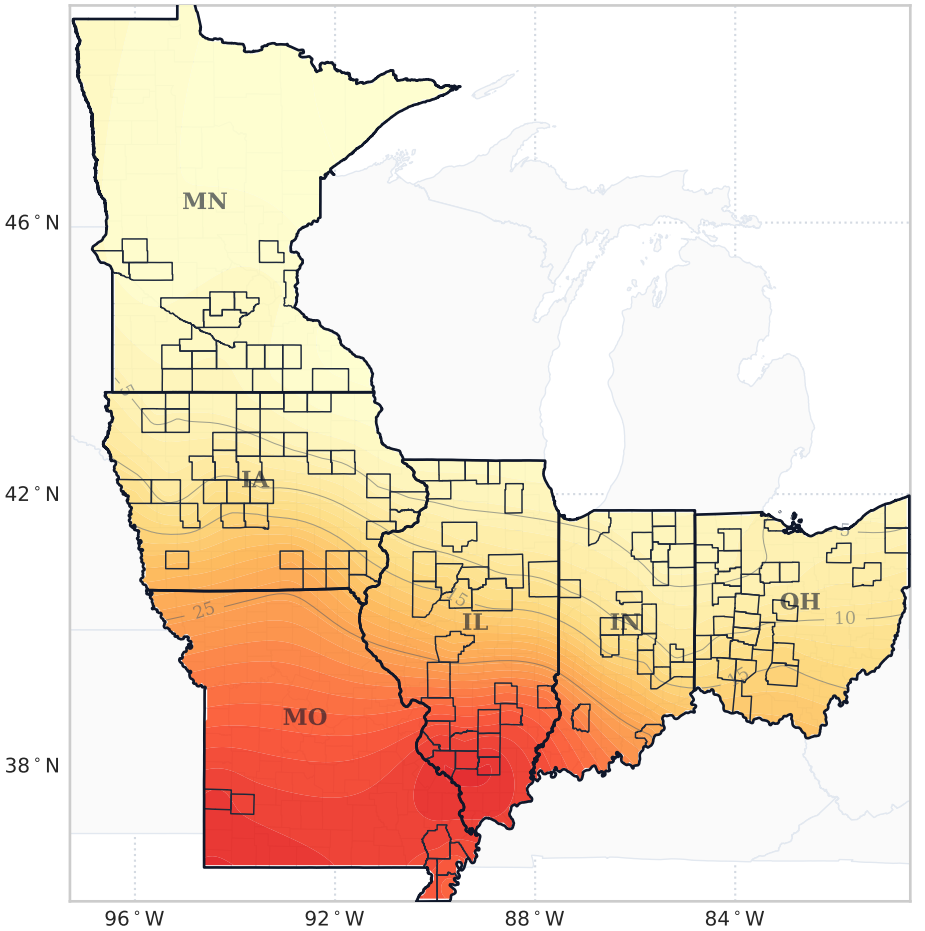

Yield Anomaly: -25.6% | Relentless Heat Dome (>35 Days in Core Corn Belt)

(c) 1994 Historic Bumper: July--August Rainfall (P)

Yield Anomaly: +10.7% | Plentiful, Well-Distributed Rain (>200 mm Everywhere)

(d) 1994 Historic Bumper: Extreme Heat Stress (HD_{30})

Yield Anomaly: +10.7% | Near-Complete Absence of Heat Stress (<10 Days in North/East)

July--August Total Precipitation: P (mm) [Yellow = Deficit ← → Blue = Plentiful Rainfall]

July--August Extreme Heat Days: HD_{30} ($T_{max} \geq 30\,^{\circ}$C, days) [Yellow = Mild ← → Red = High Thermal Stress]
